/>

/ Professional experience

Fullstack library management system based on Node.js Rest API server and React.
REST API based on Express and MongoDB. Authentication done by the Passport-JWT web tokens. Server manages CRUD operations as well as data validation, security and user email verification. Interactive UI based on React hooks and Redux. Interface implemented by Material-UI component library.

Fullstack Node.js Socket.io and React real time chat application.
Client-side application based on React framework. Users can log in via unique user ID and communicate with each other in private or public rooms. Server side implemented with Socket.io module and JavaScript Node framework.

Fullstack Virtual social network based on PostgreSQL, Spring Boot and Spring Security Java framework.
Users can share their posts and upload images to the feed. Users can subscribe to each other. Admin-only restricted areas for user management. Uploads store in Amazon AWS S3 bucket server.

Fullstack File management system based on PostgreSQL, Spring Boot and Spring Security Java framework.
A web application for uploading and implementing CRUD operations of authenticated user private files. Users can also store and save their passwords which will be encrypted on the server side and decrypted back on the client side.
